The creation of warehousing facilities at the block level is also notable

Sohan Lal Commodity Management (SLCM) Group has welcomed the 25-year roadmap laid down by Prime Minister Narendra Modi for the country's all-around development in his public address on India's 75th Independence Day. SLCM has also welcomed the government's proposal to enhance the views and expertise of scientists to modernise the nation's agriculture sector.

According to SLCM, the creation of warehousing facilities at the block level is notable. The initiative will go a long way to not only ensure proper storage facilities for agri commodities but also help curb wastage significantly.

Sandeep Sabharwal, CEO, SLCM, "We have successfully implemented solutions like AgriReach and AgriSuraksha that are embedded in technologies like the internet of things (IoT), artificial intelligence (AI) and machine learning (ML). In a country like India where post-harvest losses are pegged at nearly 10 per cent, the solutions have helped in not only substantially reducing wastage of agri commodities to 0.5 per cent irrespective of infrastructure, crop or geographic location but also helped in significantly

SLCM Welcomes Prime Minister's Blueprint for Agriculture Sector

Sandeep Sabharwal, CEO, SCLM
Tuesday 17th of August 2021 10:50:00 PM

Mr. Sandeep Sabharwal
CEO, SCLM

Sohan Lal Commodity Management Ltd (SCLM) Group has welcomed the 25-year roadmap laid down by Hon'ble Prime Minister Shri Narendra Modi for the country's all-round development in his public address on the historic occasion of India's 75th Independence Day on Sunday. As one of the Country's leading integrated agri-logistics conglomerates actively engaged in warehouse management, agriculture financing and collateral management to procurement, leveraging the latest technologies, we particularly welcome the Central Government's proposal to enhance the vision and expertise of our scientists to modernize the Nation's Agriculture Sector.

In a statement issued here, Mr Sabharwal said, "The Prime Minister also aptly drew the citizens' attention to the challenges before the smallholder farmers of working landholdings and how reforms like a robust crop insurance scheme, increasing the minimum support price, provision of cheaper bank loans, deployment of solar power, creation of farmer producer organizations (FPOs) and transport of agricultural produce through special Kisan Rail services of Indian Railways are motivating them to work on increasing agricultural yield."

"We particularly welcome the proposal by the Hon'ble Prime Minister to create warehousing facilities at the block level. When this gets rolled out, it would go a long way in not only ensuring proper storage facilities for agri commodities but also help curb their wastage significantly. In this regard, we at SCLM would like to reiterate our commitment to continue to work on developing state-of-the-art yet cost-effective 'Made for India' warehousing solutions using our strong in-house technology backbone."

"In 12 years of our existence, the SCLM Group has successfully implemented solutions like AgriReach and AgriGolekha that are embedded in technologies like the Internet of Things (IoT), artificial intelligence (AI) and machine learning (ML). In a country like India where post-harvest losses are pegged at nearly 10%, these solutions have helped in not only substantially reducing wastage of agri commodities to 0.5% irrespective of infrastructure, crop or geographic location but also helped in significantly curtailing pilferage."

"The resultant standard operating procedure (SOP) envisaging technology with agri domain expertise, allows us to operate any warehouse agnostic of infrastructure, location, weather pattern and crop-type anywhere in India."

"By July 31, 2021, SCLM has handled more than 525 agri commodities across India. The Group manages a technology-enabled network of more than 7,134 warehouses and 26 cold storage pan-India spread over a 102.19 million sq. ft. area and throughput of more than 1715.12 million metric tonnes (MMT). With our expertise in collateral management, we have impacted 50,1661 farmers since 2014 by disbursing Rs 22.21 billion in loans. By July 2021, SCLM had directly impacted the livelihoods of over 36.58 million people and positively touched the lives of another 160-15 million people."
